

Table 1 Stages of sedation and recovery employed in the current study for different types of anesthetics (Filiciotto et al., 2012)

Stage of sedation (short term)	Recordable behavior
S1	Loss of equilibrium
S2	Reduced response (loss of gross body movement)
S3	Losing response, fish can pulled from the posterior fin and reduced opercular movement
Stage of recovery	Recordable behavior
R1	regular operculum movement
R2	regular body movement
R3	complete equilibrium regained
