

Table 2 Production and specific growth rates of different groups of zooplankton

Traitements	Rotifer ( <i>Brachionus sp</i> and <i>Asplanchna sp.</i> )			Cladoceran ( <i>Moina sp.</i> and <i>Daphnia sp.</i> )			Copepods ( <i>Thermocyclops sp.</i> )		
	P (ind/j)	$\mu$ (j <sup>-1</sup> )	R <sup>2</sup>	P (ind/j)	$\mu$ (j <sup>-1</sup> )	R <sup>2</sup>	P (ind/j)	$\mu$ (j <sup>-1</sup> )	R <sup>2</sup>
T <sub>0</sub>	2±0.48	0.10f	0.78	7±1.54	0.00ef	-0.10	7±11.54	0.00g	0.00
T <sub>1</sub>	108±0.80	0.34e	0.90	13±1.54	0.00e	0.00	87±30.55	0.34f	0.99
T <sub>2</sub>	509±1.27	1.48a	0.94	840±20	1.53a	0.82	260±20	1.28a	0.91
T <sub>3</sub>	455±0.83	0.94c	0.87	153±30.55	1.09c	0.88	193±30.55	1.19b	0.92
T <sub>4</sub>	451±1.27	1.30b	0.81	340±20	1.47b	0.97	220±20	0.89c	0.94
T <sub>5</sub>	253±0.83	0.81d	0.84	180±20	0.54d	0.97	227±29.03	0.89ce	0.98

Note:  $\mu$  = specific growth rate, R<sup>2</sup> = coefficient of correlation, P = daily production. Means followed by the same letter are not significantly different (P>0.05) according to the LSD test of Fisher
