

Table 3 Estimated parameters of length-weight relationship for different *Oreochromis niloticus* strains

Types of strains	Parameters of length-weight relationship			Remark
	'a'	'b'	'r'	
Hawassa	-1.83	3.04	88a	
Ziway	-2.66	3.78*	89.5a	3: is growth exponent (b) value that shows isometric growth
Hora	-2.49	3.63	90.5a	
Koka	-1.75	2.99	93.5a	

Note: * indicate that b for Ziway strain revealed significantly ($p < 0.05$) different from 3, mean values in the same column having same letter are not significantly different
